

Helen Sharman

1963-

“We should be pushing our boundaries.”

“There is very little difference between men and women in space.”

“Just because I’m a woman does not mean I have to deal with everything to do with food.”

“You don’t go into space just for science. Economically, it is not worth it. I think the reason we should be in space is for the exploration, it’s the human endeavour.”
